

DEPLOY BY SHIFTGIG

OVERVIEW:

We understand that building, managing, and retaining your workforce can be challenging. But what if you could remove the friction from the complex process of filling assignments and communicating with workers? What if you could match your pool of talented workers to clients in an easy, scalable way? Deploy by Shiftgig can help.

Deploy is a powerful marketplace software platform that uses sophisticated algorithms to match workers with assignments based on their skills and expertise.

KEY DIFFERENTIATORS:

Opportunity and empowerment

Deploy gives workers the flexibility to select from a variety of shifts that fit their schedule and skillset after being interviewed and vetted by you.

Redeployment and engagement

Our platform allows you to manage your workforce and encourages your workers to develop new skills to expand their opportunities for more assignments.

Data and analytics

Unlock metrics that matter to you and your clients with pre-built dashboards and custom analytics.

Connect and scale

Our open APIs allow you to easily integrate Deploy into your current technology stack and process flow.

HOW IT WORKS:

Deploy has three core applications that help you power your workforce.

Operations Manager

A web-based dashboard and administrator view with the highest level of access on the platform. Manage your workforce and their profiles, monitor performance, and control business-functions like timecards and orders.

Business App

Made for your clients and on-site staff, our business app and web interface give them the option to place work orders, manage and communicate with workers, and provide feedback on worker performance.

Mobile Worker App

Available on iOS and Android, our native mobile app gives workers the ability to browse and claim shifts, provide feedback on work, and clock-in and out with ease.

WE'RE WORKER-FOCUSED:

We have a background in staffing but we're rooted in technology and workers are the center of our platform. We built Deploy to empower workers while streamlining your operations. By offering employment opportunities and giving workers flexibility and choice, you'll be building a worker-focused marketplace that keeps them engaged. You'll also be able to match the right worker to the right assignment faster and easier than ever.

Ready to see Deploy in action? Let's get started.
